**Sinclair**  
Dental | Dentaire

Be part of the innovation that's  
shaping the future of dental care!

Don't miss this exclusive opportunity. Join the renowned Dr. David Clark as he presents the groundbreaking Evolve Posterior Matrices. Witness how modern, engineering-driven techniques are revolutionizing the world of dentistry.

Traditionally, composite materials have been placed inside the tooth. Now, we can work around the tooth using innovative techniques. This course will explore the benefits of injection molding composites with advanced preparations, super-anatomic clear matrices, and heated multi-viscosity composites, offering effective solutions that can reduce the need for crowns. Join Dr. Clark to discover the rationale and techniques behind modern composite applications. Most importantly, learn how the Clark Class II approach can minimize the risk of tooth fractures, a common consequence of traditional cavity preparations.

## Learning Topics

- + Understand the modern Class II or ICE (Infinity edge, Compression based, and Enamel driven)
- + Identify the 7 keys to world class contacts in a Class II
- + Explore how to safely bulk fill in Class I and Class II
