As our Industry continues to navigate through new challenges, we rely on our training, science, and commitment to provide the best care possible.

As clinicians, we are far more likely to stay in compliance when we understand the foundation of the science that helps to create the guidance.

What is a PCD? Can I flash sterilize? What's the frequency for biological monitoring?

Join us for a practical review of IPAC Standards of Practice, so that you can confirm that YES, you are still compliant!

Infection Prevention and Control Training for the Dental Office Team.

The Infection Control seminar consists of a two-hour presentation on infection control transmission and protocols for all staff and doctors. At the end, there will be a Q&A.

This will qualify for your staff IPAC Annual training.

\*CE certificates are awarded only to a registered doctor or auxiliary staff member, not to a clinic
