or scan QR code before April 26, 2024.
Limited seats available!

Join us for an evening of learning, hands-on scanning, sipping & snacking!

This course illustrates how dental practices use digital scanning technology for diagnostics, treatment planning, lab communication, patient education and all their crown & bridge and orthodontic needs.

See how to save time and money with digital workflow, and help increase your practice's bottom line.

Once you have a scanner, it allows you to add other digital equipment, such as 3D printers or mills to your workflow, which helps further advance your revenue.

About the speaker, John S. Martin:

With 30+ years' experience in the dental industry, John has been instrumental in educating and supporting thousands of Canadian dental professionals (both clinical and technical) with the integration of digital scanning technology. His knowledge in restorative dentistry and his focus and passion for the iTero intraoral scanner and digital workflows provides the highest level of support for all dental professionals looking to incorporate or expand their digital footprint.
